

# |Comparison with PAWLs

## 1. Annotation Support:

- **PAWLS:** PAWLS supports mixed-mode annotation, including textual annotation and non-textual bounding boxes, providing a comprehensive framework for annotating various elements within PDF documents.
- **Annoty:** Annoty focuses on extracting annotated text from PDFs and enabling users to manually connect or link the annotations, emphasizing the manual linking process as a key aspect of the annotation workflow.

## 2. Contextual Annotation:

- **PAWLS:** The paper emphasizes annotating data directly on top of a PDF overlay, allowing naturally occurring text to be annotated in its original context within the PDF document.
- **Annoty:** Similarly, Annoty involves extracting annotated text from PDFs and enabling users to manually connect or link the annotations, which also emphasizes maintaining the original context of the annotations within the PDF.
